

Outcome Verification – Part 2

Treatment differences and per-group breakdown.

Layer 5 – Treatment differences (headline outcomes)

Raw control-group mean and unadjusted treatment-control difference, by wave. The treatment indicator is the JEEA-style PEP eligibility (date >= 0 after reflection); these are not RD estimates and contain no controls. Use them as a sanity check that the program-eligible group differs in the expected direction.

Outcome	W1 ctrl mean	W1 (T-C)	W2 ctrl mean	W2 (T-C)
Well-being index (SD)	-0.095	0.487	-0.103	0.363
