\* This folder contains STATA files to generate the results presented in the paper.

STATA do-file analysis.do produces all Tables and Figures from the paper (including appendix), except those which are not based on data (Figures A1, A2, A3, A4 and Table A1). It should be ran from main.do. The folder path should be set on line 15 of main.do

analysis.do requires the following folders:

- 01\_data
- 02\_output

analysis.do uses 01\_data and creates output (tables and figures) in 02\_output.

- Commands insert\_into\_file; store\_est\_tpl; and table\_from\_tpl require that Python 2.7 is installed (for more details, see: <https://github.com/paulnov/stata-tex>)

- Files sample\_table.csv, stata-tex.do, table\_from\_tpl.py, and all late files with the prefix "TPL" in the folder 02\_output/tables are required for the code to run
